# Research & Knowing: Epistemology

- How do we know something?
- How do empiricists know?
- How do scientists know?
- How do we discharge what we *previously* knew?

# Collaboration: Good and Bad Times

## BREAKOUT SESSION

Describe a time when you had a **positive** experience collaborating with researchers across qual- and quant.

Describe a time when you had a **challenging** experience collaborating with researchers across qual- and quant.

# Collaboration: Constraints & Solutions

Let's role play some situations we  
might have heard before...

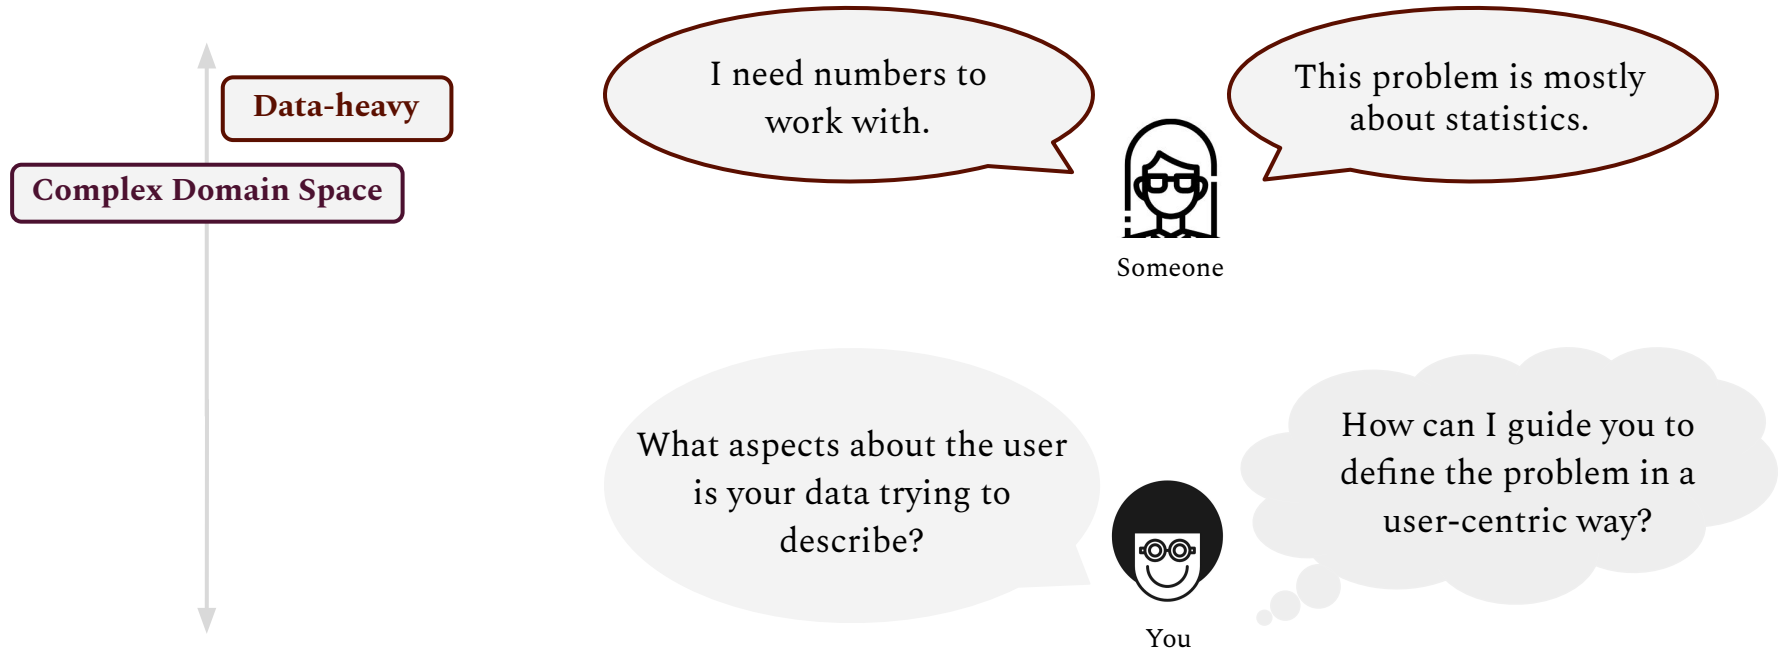

You

# Collaboration: Constraints & Solutions

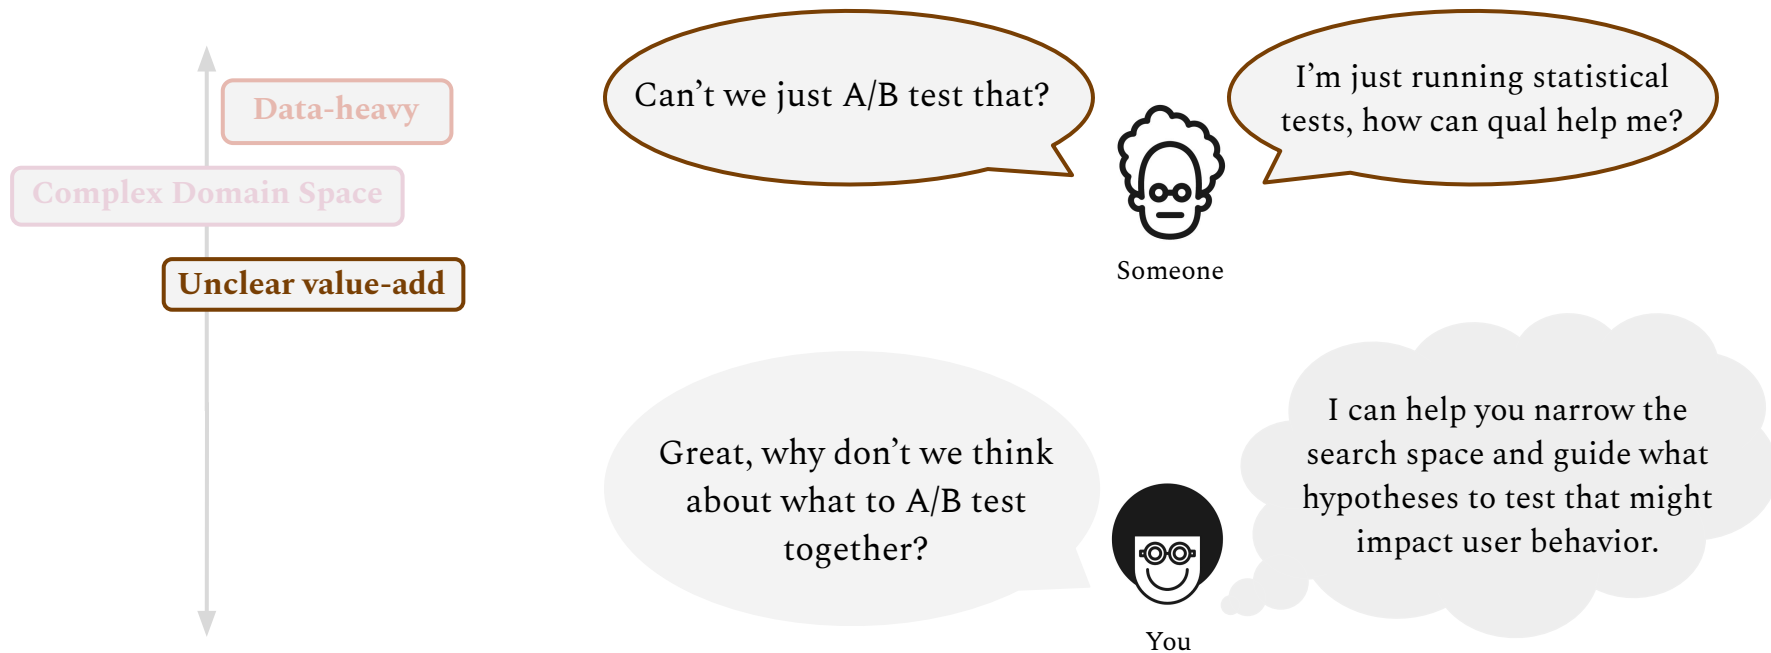

# Collaboration: Constraints & Solutions

# Collaboration: Constraints & Solutions

# Collaboration: Constraints & Solutions

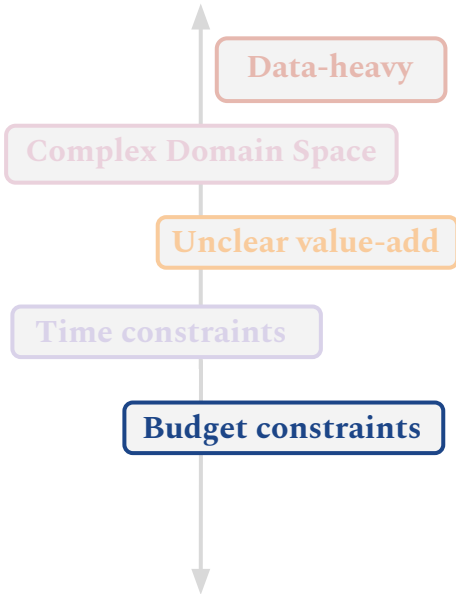

# Collaboration: Constraints & Solutions

# Collaboration: Constraints & Solutions

# Collaboration: Constraints & Solutions

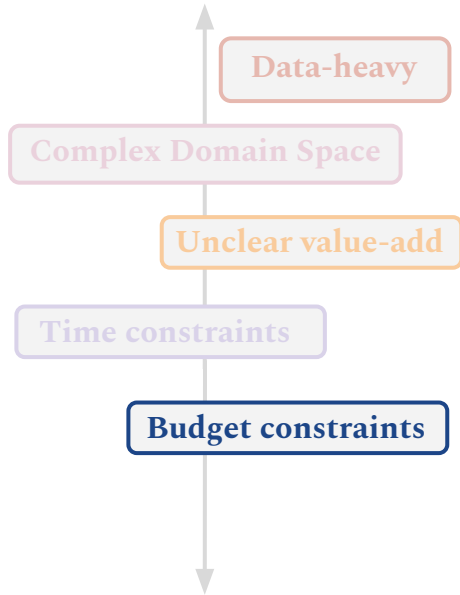

I don't want to pay extra for your services to conduct user interviews

Someone

I know my users well, so I don't want to pay to learn what I already know

# Collaboration: Constraints & Solutions

I don't want to pay extra for your services to conduct user interviews

Someone

I know my users well, so I don't want to pay to learn what I already know

We'll end up saving money and time if we have a better understanding of what to ask and who to focus on

You

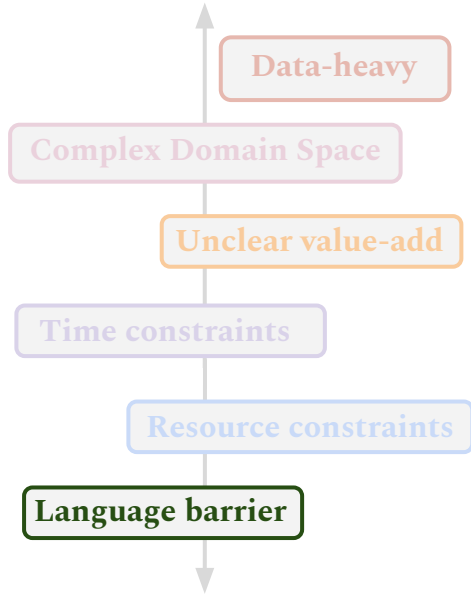

How can I make them understand that it's a holistic approach?

# Collaboration: Constraints & Solutions

# Collaboration: Constraints & Solutions

The model is not doing well,  
can you help us understand  
what's wrong?

Someone

I don't know how to apply user  
insights onto my data

Why did you choose this model?  
What assumptions are we making?  
If it was working before, maybe the  
data is different.

You

I need to get to the meat of  
it. What are we describing /  
measuring / predicting?

# Positive Contributions to ~~Quant~~ ~~Qual~~ Research

- Get **better** data
- Align key metrics with business goals
- Identify assumptions
- Understand users (population of study)
- Have conversational thought-partners

# Positive Contributions to ~~Quant~~ ~~Qual~~ Research

- **Get better data**
- Align key metrics with business goals
- Identify assumptions
- Understand users (population of study)
- Have conversational thought-partners

Design collection systems to get the data we really want, not the one we just happen have.

→ *What would be the ideal measurement for this user behavior?*

→ *What are the limitations in the data we are using?*

→ **Ask:** *What do we want to learn from this? How do we want to use this knowledge?*

# Positive Contributions to ~~Quant~~ ~~Qual~~ Research

- Get **better** data
- **Align key metrics with business goals**
- Identify assumptions
- Understand users (population of study)
- Have conversational thought-partners

Business relies on metrics to make decisions and track progress over time.

- *Most metrics are “proxies” for the real underlying question.*
- *Over time, all metrics break down.*
- *Myopic metric optimization can dilute the overall goal, and lead a company to undesired outcomes.*
- **Ask:** *What are we trying to accomplish or measure?  
How do we know this measurement captures our goal?*

# Positive Contributions to ~~Quant~~ ~~Qual~~ Research

- Get **better** data
- Align key metrics with business goals
- **Identify assumptions**
- Understand users (population of study)
- Have conversational thought-partners

Inquiry is pizza dough, not sourdough:  
Poke at it!

→ *Ask: What assumptions are we making about the users?*

→ *Ask: How do we think users are going to respond to this product change? How does this fit with the broader experience of the full product/service?*

# Positive Contributions to ~~Quant~~ ~~Qual~~ Research

- Get **better** data
- Align key metrics with business goals
- Identify assumptions
- **Understand users (population of study)**
- Have conversational thought-partners

What is the population of study?

- *Comparability and selection bias*
- *Look at the population distribution*

→ **Ask:** *Who is going to receive this [feature]? Why do we think they are similar to this test group?*

# Positive Contributions to ~~Quant~~ ~~Qual~~ Research

- Get **better** data
- Align key metrics with business goals
- Identify assumptions
- Understand users (population of study)
- **Have conversational thought-partners**

Have conversations about the research ideas:

- *Everything that any researcher is trying to do is (1) describe; (2) predict; (3) explain; (4) ~~verify~~ evaluate some concept.*
- *Try to strip away algorithm/compute jargon to find which of these tasks they're pursuing. Then, you're having a conversation.*
- *Just ask.*

# Positive Contributions to ~~Quant~~ ~~Qual~~ Research

Understand users and  
population of study

Conversational  
Thought-Partners

Clarify  
Assumptions

Get Better Data

Align Key Metrics with  
Business Goals
